## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 2, 2007 has been entered.

### ***Response to Arguments***

2. Applicant's arguments filed September 15, 2006 have been fully considered but they are not persuasive.

Applicant asserts that the amendment overcome the rejection under 35 USC 102(b) because now claims 5 and 30 "clearly recite the generation of two bits for each bit in each of the bit streams." First, the language "first first bit," "second first bit," "second first bit," and "second second bit" itself is very confusing. Second, examiner cannot see any substantive difference between this language and the previous used language of "first bit," "second bit," "third bit," and "fourth bit" since both appears to simply map (at least) a two-bit output to a one-bit input. There is no further limitation compelling a reading that only two bits are generated for each bit.

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

***Claim Rejections - 35 USC § 102***

4. Claims 5 and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Calderbank et al (US 5,115,453 previously cited).

Calderbank discloses (see Fig. 1) an encoder for encoding a first bit stream (output from Scramber 104), comprising:

means (110) for generating a second bit stream ( $Y_2, Y_3$ ) from the first bit stream, the second bit stream having one or more different corresponding bit values than the first bit stream;

means (124) for generating “a first first bit” and “a second first bit” for each bit in the first bit stream; and

means (122) for generating “a second first bit” and “a second second bit” for each bit in the second bit stream, wherein the means for generating a second bit stream comprises at least one of a ones complementer and a differential encoder. See the means (110) for generating the second bit stream is a differential encoder.

***Allowable Subject Matter***

5. Claims 9, 13-27, 32, 34 and 35 are allowed.
